CIS 5512 FINAL PROJECT INDIVIDUAL REPORT

HONGHAO TUID:915681438 (TUJ89290)

A. Personal Contribution

My contribution in this project is that I have successfully built run application page, built run time monitor and built two scalability charts using Ajax, JQuery and Chart.js (Point 15, 16 and 17).

B. What I have learned from this project

This is the first time learning to build a web page. During this project, I have suffered a lot because I don't have the basic know about PHP, Ajax or JavaScript. All I could do is to imitate the CIS 5015 web pages's code, especially php and js files of CIS 5015. I learned how to built a simple web page through PHP, how to get feedback from applications through Ajax and how to build chart using JQuery and MySQL database.

C. My comment on this project

In general, this is a good project. It forces us to learn something new, something that I have never touched before. The problem is we were implementing web services, but this course's name is operating system. I thought we would mainly focus on operating system mechanism in final project before the course started.
